Data: SHI J	NOVELTY The clean coal burning catalyst comprises a composite hydrogenstoring alloy, alkali metal chloride, alkali earth metal chloride, boride, alkali metal oxidant, iron and manganese oxidant and other additive. The production includes the preparation of a composite hydrogenstoring alloy, and the composition of coal burning catalyst.	ADVANTAGE The clean coal burning catalyst improves the coal burning efficiency and reduces pollution, and its use makes it possible to use high-sulfin and low-heat value coal in producing a briquette leading	to low coal burning cost.
